Tires

Profilerr^G

Latest addition to the car range.

The BFGoodrich Profilerr^G radically updates the concept of Grip. Its rounded profile, the rigidity of the tread pattern and sidewalls offer a driving precision at high performance, rapid response and exceptional cornering grip in dry conditions.

Control and security are equally assured in wet conditions by the central canals which facilitate water evacuation at high speed.

features and benefits

- 1 Directional tread pattern, for excellent high speed stability and low noise.
- 2 Wide central rib and maximised contact patch, give rapid response to driver input and excellent directional stability.
- 3 Large tread blocks, flat crown and wide shoulders give optimum handling during acceleration and deceleration.
- 4 Rounded shoulder profile for more progressive and improved "feel" in bends.

5 Heat-resistant casing with a rigid bead area, give accurate transmission of input from driver to road and directional precision in the tightest of bends.

6 Wide, deep central grooves allow rapid evacuation of deep water for perfect control.

7 Lateral grooves are perfectly positioned to clear residual water via the shoulders.

8 Rubber compound ensures excellent grip on wet surfaces.

9 The ETEC™ (Equal Tension Containment) system enables distribution of the stress in the crown area, equalising surface pressure and minimising centrifugal growth at high speed.
