

BFGoodrich[®]
Tires

Touring

The **BFGoodrich Touring** offers the pleasure of total **control** and **precision** to drivers of small and medium engine cars.

Amazing levels of **Grip** on dry and wet roads, excellent **performance** under **braking** and long life clearly identify this tyre as part of the **BFGoodrich** family.

Driving enjoyment and total control.

BFGoodrich[®]

Tires

features and benefits

ON DRY ROADS

- 1 **Stability and control** : Angled central and shoulder grooves for optimised crown profile : directional stability in bends and in straight lines.

ON WET ROADS

- 2 **Grip** : High grip tread rubber compound for improved levels of grip on wet roads.
- 3 **Efficiency** : The opposed chevron shoulder sipes and the 'paddle' shaped slots in the central blocks grip the road under braking: braking distances are reduced.
- 4 **Wear pattern** : Good distribution of contact patch pressure means regular, even wear.
- 5 **Long life** : Optimised tread depth and groove ratio combined with the abrasion resistant tread rubber compound mean a lower wear rate.
